North Seattle College | September 2024 - May 2028

Bachelor of Applied Science, Application Development

- Relevant coursework: Intermediate Development, Database Technology, App Design & Prototyping

---

Skills

- **Languages & Frameworks:** React, HTML, CSS, JavaScript
- **Design & UI/UX:** Figma, UI/UX Implementation, User Research, Prototyping
- **Databases & Tools:** MySQL Workbench, Git, GitHub, Version Control
- **IT & Hardware:** Computer Hardware Repair, System Diagnostics, PXE Server, Secure Data Destruction

---

Work History

North Seattle College, Customer Service Representative | October 2024 - Present

- Responsible for assisting students with class registration and account troubleshooting while maintaining the Continuing Education front desk operations, including administrative support and records management.
- Delivered responsive customer service in-person, by phone, and via email to assist students with class registration and campus resources
- Managed daily data entry and student records to support front desk operations, ensuring administrative tasks were completed and accurate on time.

SK Tes, Technician Refurbisher | Tukwila, WA | February 2023 - June 2023

- Repaired broken computers and tested internal components to restore devices to a like-new state for resale using system diagnostics and quality control, and secure data destruction.
- Diagnosed and repaired computer hardware issues by replacing faulty components and reinstalling operating systems
- Wiped sensitive data and re-imagined operating systems using a PXE Server and USB Drives

Amazon Fulfillment Center, Fulfillment Associate | Kent, WA October 2019 - December 2019

- Moved quickly through a giant warehouse to find, scan, and pack the exact items people bought online using organization, efficiency, and teamwork
- Processed and routed over 400 items per hour utilizing Workflow Optimizations successfully preventing delays and keeping packing lines moving smoothly.
- Verified shipping paperwork and scanned barcodes using internal Digital Systems, catching errors before boxes left the building and reducing order mistakes by 20%

Projects

North Seattle College Developer Expo | January 2026 - May 2026

- Built the public website for the college's application development website to improve information accessibility using web development, UI, UX implementation, and version control.
- Programmed web pages directly from Figma designs to deliver a modern public website for the Application Development Department.
- Styled custom fonts and flexible page layouts using React to make sure the site was easy to read and navigate on any device.
- Worked with teammates to review and update code, safely merging our project updates together without errors using Git branches and pull requests.

CoinQuest Budgeting App | January 2026 - March 2026

- Designed and built a fun budgeting app for college students by figuring out what they needed and drawing the screens they interact with, using user research, app design, and prototyping.
- Created the visual layouts and interactive screens for the app's dashboard and settings using Figma, building a clear and easy-to-navigate experience for the end user.
- Ran Usability Testing to see how people interacted with the app, identifying a confusing menu and immediately fixing the design to keep users from getting stuck.

Software Component Database | January 2025 - March 2025

- Built a digital filing system to organize software add-ons and creator profiles so no information gets lost or duplicated using database design, data organization, and team collaboration.
- Organized tables and data connections using MySQL Workbench to securely store software extensions, version histories, and developer details without repeating information.
- Mapped out the database visually and linked tables together with Primary and Foreign Keys to show exactly how all the data connected, making it easy for teammates to understand and help build.
